THE PATENT OFFICE
PATENTS AND DESIGNS
Kolkata, the 1st May 2004

ADDRESSES AND JURISDICTION OF THE OFFICES OF THE PATENTS OFFICE

The Patent Office has its Head Office at Kolkata and Branch Offices at Mumbai, Delhi and Chennai having Territorial Jurisdiction on a Zonal basis as shown below:—

1. Patent Office Branch,
Todi Estates, IIIrd Floor,
Sun Mill Compound,
Lower Parel (West),
Mumbai-400 013.

The States of Gujarat,
Maharashtra, Madhya Pradesh
and Goa and the Union
Territories of Daman and
Diu & Dadra and Nagar Haveli.

Telegraphic Address "PATOFFICE"

Phone Nos. (022) 2492 4058, 2496 1370, 2492 3684,
2490 3852

Fax Nos. (022) 2493 0622, 2490 3852

E-mail: patent@vsnl.net

2. Patent Office Branch,
W-5, West Patel Nagar,
New Delhi-110 008.

The States of Haryana,
Himachal Pradesh,
Jammu and Kashmir,
Punjab, Rajasthan,
Uttar Pradesh and Delhi and the
Union Territory of Chandigarh.

Telegraphic Address "PATENTOFIC"
Phone Nos. (011) 2587 1255, 2587 1256,
2587 1257, 2587 1258.
Fax No. (011) 2587 1256.
E-mail: delhipatent@vsnl.net

3. Patent Office Branch,
Guna Complex, 6th Floor, Annex-II,
443, Annasalai, Teynampet,
Chennai-600 018.

The States of Andhra Pradesh,
Karnataka, Kerala, Tamil Nadu and
Pondicherry and the Union
Territories of Laccadive, Minicoy and
Aminidivi Islands.

Telegraphic Address "PATENTOFFIC"
Phone Nos. (044) 2431 4324/4325/4326.
Fax Nos. (044) 2431 4750/4751.
E-mail. patentchennai@vsnl.net

4. Patent Office (Head Office),
Nizam Palace, 2nd M.S.O. Building,
5th, 6th & 7th Floor,
234/4, Acharya Jagadish Bose Road,
Kolkata-700 020.

Rest of India

Telegraphic Address "PATENTS"
Phone Nos. (033) 2247 4401/4402/4403.

Fax Nos. (033) 2247 3851, 2240 1353.
E-mail. patentin@vsnl.com
patindia@glasci01.vsnl.net.in
Website : http://Ipindia.nic.in

All applications, notices, statements or other documents or any fees required by the Patents Act, 1970 and the Patents (Amendment) Act, 2002 or by the Patents Rules, 2003 will be received only at the appropriate offices of the Patent Office.

Fees : The fees may either be paid in cash or may be sent by Bank Draft or Cheques payable to the Controller of Patents drawn on a scheduled Bank at the place where the appropriate office is situated.

पेटेंट कार्यालय

एकस्व तथा अधिकल्प

कोलकाता, दिनांक 1 मई 2004

पेटेंट कार्यालय के कार्यालयों के पते एवं क्षेत्राधिकार

पेटेंट कार्यालय का प्रधान कार्यालय कोलकाता में अवस्थित है तथा मुम्बई, दिल्ली एवं चेन्नई में इसके शाखा कार्यालय हैं, जिनके प्रादेशिक क्षेत्राधिकार जोन के आधार पर निम्न रूप में प्रदर्शित हैं:--

1. पेटेंट कार्यालय शाखा,
टोडी इस्टेट, तीसरा तल,
सन मिल कम्पाउंड,
लोअर परेल (वेस्ट),
मुम्बई - 400 013।

गुजरात, महाराष्ट्र, मध्य प्रदेश तथा
गोआ राज्य क्षेत्र एवं
संघ शासित क्षेत्र, दमन तथा दीव एवं
दादर और नगर हवेली।

तार पता : "पेटोफिस"

फोन : (022) 2492 4058, 2496 1370, 2490 3684, 2490 3852

फैक्स : (022) 2495 0622, 2490 3852

ई. मेल : patnum@vsnl.net

2. पेटेंट कार्यालय शाखा,
डब्ल्यू-5, वेस्ट पटेल नगर,
नई दिल्ली - 110 008।

हरियाणा, हिमाचल प्रदेश, जम्मू
तथा कश्मीर, पंजाब, राजस्थान,
उत्तर प्रदेश तथा दिल्ली राज्य
क्षेत्रों एवं संघ शासित क्षेत्र चंडीगढ़।

तार पता : "पेटेंटोफिक"

फोन : (011) 2587 1255, 2587 1256, 2587 1257,
2587 1258.

फैक्स : (011) 2587 1256.

- ई. मेल : delhipatent@vsnl.net

3. पेटेंट कार्यालय शाखा,

गुना कम्प्लेक्स, छठवा तल, एनेक्स-II,
443, अन्नासलाई, तेनामपेट,
चेन्नई - 600 018।

आन्ध्र प्रदेश, कर्नाटक, केरल, तमिलनाडु
तथा पाण्डिचेरी राज्य क्षेत्र एवं संघ
शासित क्षेत्र लक्षद्वीप, मिनिक्काय तथा एमिनिदिवि द्वीप।
तार पता - "पेटेंटोफिक"

फोन : (044) 2431 4324/4325/4326.

फैक्स : (044) 2431 4750/4751.

ई. मेल : patentchennai@vsnl.net

4. पेटेंट कार्यालय (प्रधान कार्यालय),

निजाम पैलेस, द्वितीय बहुतलीय कार्यालय
भवन, 5वां, 6वा व 7वां तल,
234/4, आचार्य जगदीश बोस मार्ग,
कोलकाता - 700 020।

भारत का अवशेष क्षेत्र।

तार पता - "पेटेंट्स"

फोन : (033) 2247 4401/4402/4403.

फैक्स : (033) 2247 3851, 2240 1353.

ई. मेल : patentin@vsnl.com

patindia@glasci01.vsnl.net.in

वेब साइट : http://Ipindia.nic.in

पेटेंट अधिनियम, 1970 तथा पेटेंट (संशोधन) अधिनियम, 2002 अथवा पेटेंट नियम, 2003 द्वारा अपेक्षित सभी आवेदन, सूचनाएं, विवरण या अन्य दस्तावेज या कोई फीस पेटेंट कार्यालय के केवल समुचित कार्यालय में ही ग्रहण किए जाएंगे।

शुल्क : शुल्कों की अदायगी या तो नकद की जाएगी अथवा जहां उपयुक्त कार्यालय अवस्थित है, उस स्थान के अनुसूचित बैंक से नियंत्रक, पेटेंट को भुगतान योग्य बैंक ड्राफ्ट अथवा बैंक द्वारा की जा सकती है।

CORRIGENDUM (MUMBAI)

Restoration proceedings in respect of Patent No. 179188, appeared in Gazette of India dated 28.2.2004. Read in second line as granted to Dr. ANIL MOKASHI, AND Mr. AVINASH NARAYAN RAOKHAIRATKAR, AND Mr. SUNIL SUDHAKAR SUBHEDAR. Instead of M/S. URMINUS INDUSTRIES LTD., for an invention relating to A MECHANISED RESPIRATOR, instead of "AN ULTRA VOILET DISINFECTOR."

CORRIGENDUM (DELHI)

Notice is hereby given that the Patent No. 189865 (Application No. 1262/Del/94) dated 05.10.94 sealed on 11.02.2004 and the same is likely to be advertised in the official gazette Part III Section-2 dated 20.03.2004.

Please read as Patent No. 190544 instead of Patent No. 189865.

Notice is hereby given that the Patent No. 189967 (Application No. 1290/Del/94) dated 13.10.94 sealed on 11.02.2004 and the same is likely to be advertised in the official gazette Part III Section-2 dated 20.03.2004.

Please read as Patent No. 189867 instead of Patent No. 189967.

(57) Abstract :

An optical fiber and an optical fiber preform having optical characteristics, such as the wavelength dispersion, close to design values by controlling the amount of change in the refractive index in the core, thereby realizing high-quality and high-speed transmission, and manufacturing methods therefor. The optical fiber or the optical fiber preform is manufactured in a manner such that at each position in the area in which the relative refractive index of the core with respect to the cladding is 80% or higher of the maximum value of the relative refractive index, the absolute value of the rate of change of the relative refractive index with respect to the position along the diameter of the cladding is 0.5 or less, where the position along the diameter of the cladding is defined by percentage with respect to the diameter.

---	--

(57) Abstract :

Two embodiments of rotating electrical machines wherein the cogging torque is substantially reduced by increasing the cogging number without increasing the number of pole teeth and permanent magnets. This is done by selecting the appropriate magnet angle to increase the number of coggings per revolution and this can be done using a computer analysis of the cogging torque for the individual magnets rather than by a trial and error method.

(57) Abstract :

A method of determining performance impact of individual components of a power plant (100) on overall thermal performance of the power plant, the method including (a) designing a first thermal model (400) of the power plant using original specification data of the power plant; (b) developing a second thermal model (300) of the power plant from measured performance data of each component of the power plant; and (c) determining the performance impact of a selected component of the power plant on the overall thermal performance of the power plant by substituting design performance data of the selected component in the first thermal model with its measured performance data.

(57) Abstract :

An arrayed fin cooling system 100 for removing waste heat from a component 500 is disclosed. The arrayed fin cooling system 100 includes plurality of discrete cooling fins 10 that act as individual heat sinks. The cooling fins 10 are arranged in a radial array so that the cooling fins 10 diverge from one another to define an air path 39 between adjacent cooling fins 10. Each cooling fin 10 includes a base 31 that is adapted to connect with a surface 501 of the component 500 to be cooled. Waste heat is transferred from the component 500 to the cooling fin 10 via the base 31. The cooling fins 10 are surrounded at an outer edge 13 by a radial shield 50 that channels an air flow A_F over the cooling fins 10 to maximize the amount of air that passes over the cooling fins 10. The cooling fins 10 can be manufactured at a low cost using processes such as stamping and forging.

(57) Abstract :

The invention relates to an injection screw drive for a plastic injection molding machine comprising axes (A1, A2) respectively provided for the rotative and for the axial motion of the injection screw (4). According to the invention, the injection screw drive has at least one double rack rail overdrive for effecting the axial motion. The injection worm drive is configured as a gear combination having at least two drive motors (18, 44) and an output axle. The gear combination has, as a core, a gear block with a gear casing (42), to which at least two reducing gears are connected that effect the rotative and the axial motion of the injection screw (4). This enables the entire machine to be provided with a short and compact structure insofar as this concerns the injection aggregate. According to a second embodiment, both drives have separate housings. The entire injection unit rests, in a known manner, on the machine stand (33) via guide rails (32) such that it can be displaced.

(57) Abstract :

An insect control mat (10). The insect control mat has a mat body (12) with indentations that define break lines (16) such that a user of the mat body can readily separate the mat body (12) along the break lines (16) into subsections. Preferably, the subsections are substantially similar to each other, with the mat body being rectangular and the subsections also being rectangular with a width less than the width of the mat body. Each subsection is treated with one or more insect control ingredients in an amount sufficient to achieve the desired level of insect control when the subsection is used by itself in a conventional mat heater. Methods of controlling insects are also disclosed wherein the mat body is separated into subsections that then are used individually, either one at a time over succeeding use periods or simultaneously in multiple conventional mat heaters.

---	---

(57) Abstract :

Piezoelectric wafers (104, 106) are affixed to a circuit card (102) to control displacement of the circuit card (102) when vibrated. A trigger wafer (110) located at an anti-node of the dominant mode shape produces a voltage as a function of modal displacement. A control system (114) responsive to the trigger wafer (110) produces voltages that are applied to flex wafers (104, 106) at a different anti-node of the dominant mode shape. The flex wafers (104, 106) expand and contract in a manner that reduces the modal displacement of the circuit card (102). Multiple flex wafers (104, 106) can exist, affixed to the circuit card (102) substantially opposite each other, or a single flex wafer (104) can exist with a single trigger wafer (110). The trigger wafer can be located substantially opposite the flex wafer or can be located elsewhere on the circuit card.

(57) Abstract :

An apparatus for measuring the alignment of a valve sealed onto a canister comprises hollow lower and upper sections, a mounting platform, and a transducer. The upper and lower interior regions cooperatively define an inner chamber in which the mounting platform is disposed. The transducer is mounted to the upper section and includes a probe extending through the upper section and into the inner chamber. The apparatus is adapted for relative rotational movement between the mounting platform and the upper section. The transducer is responsive to linear translation of the probe and displays a human-readable indication of the alignment of a valve sealed in a canister as the probe moves around the circumference of the top surface of the valve.

(57) Abstract : A composition for treating insect nets. The composition is sufficiently colored that a user can see a color change in the net when the composition is applied to it, preferably by spraying, although the composition could also be used for treating by dipping or some other means of application. The composition includes a colorant; an insect control material; and a liquid carrier. Preferably, the liquid carrier is a sprayable liquid, whether by aerosol spraying or by use of conventional mechanical sprayers. Preferably the colorant changes from being colored to being colorless upon drying of by exposure to the air. A method of treating insect nets by use of the composition is also disclosed.

(72) Name of the Inventors :

1. UESUGI MITSURU,
2. MIYOSHI KENICHI.

(57) Abstract :

When a signal requesting for a new data transmission is received, a transmission signal switching block (104) outputs an output signal of an error correction encoding block (102) to a modulation block (106), and when a signal requesting for a data retransmission is received, the transmission signal switching block (104) outputs a signal stored in a buffer (103) to the modulation block (106). A modulation method deciding block (105), upon reception of a signal requesting for a new data transmission, controls the modulation block (106) so as to perform modulation by a modulation method of the maximum rate. On the other hand, upon reception of a signal requesting for a data retransmission, the modulation method deciding block (105) controls the modulation block (106) so as to perform modulation by a modulation method for retransmission. The modulation method for the retransmission may be a method in which the maximum rate is multiplied by a predetermined constant (for example, 0.5) or may be a method fixed to a phase modulation type such as BPSK and QPSK. This reduces the number of data retransmissions, thereby improving the transmission efficiency.

(57) Abstract : Described are a system and method for managing runtime data in a computer network including servers in a server farm. One of the servers is designated as a first collector point for collecting a first type of data. A first zone including a subset of the servers is defined. The subset includes the first collector point. A first type of data is directed to the first collector point for storage. A second collector point collects a second type of data. In one embodiment, at least two servers in the server farm are designated as collector points for collecting data of the first type. A first subset of the servers are assigned to transmit data of the first type to at least one of the collector points. A second subset of the servers are assigned to transmit data of the first type to another of the collector points.

(57) **Abstract :**

The present invention relates to a tubular thermoinsulating device (10; 20; 30), comprising an evacuated envelope made of barrier sheets inside which an inorganic or polymeric, discontinuous or porous filling material (13; 23) is contained. Said envelope comprises an internal tubular element (11; 21; 31) and an external tubular element (12; 22; 32) of higher diameter, which are coaxially arranged one inside the other and are reciprocally sealed at their circular edges. The circular edges of said external tubular element (12; 22; 32) are adapted to the circular edges of said internal tubular element (11; 21; 31) by means of two plies (17, 17'; 25, 25'; 35, 35'). The present invention also relates to some processes for manufacturing said thermoinsulating device.

(57) Abstract :

An apparatus and method for controlling a plurality of electronic devices, such as consumer electronic device, or the like, via a digital bus. In particular, the present invention provides for improved interoperability of such devices over the digital bus. In one embodiment, the present invention transfers identifying information from a peripheral device to a display device during a discovery mode for providing a device selection screen having a plurality of device icons displayed thereon. The device icons are generated by the display, or controlling device, in response to identifying information, such as keywords stored in a configuration ROM of the peripheral device.

(57) Abstract :

A communication terminal containing apparatus for performing communication between communication terminals under different systems in the radio LAN without interfering each other. In a first system, after a transmission/reception period in control channels RCH, BCH, FCH, and ACH, a transmission/reception period is set for a downstream line signal, a direct link signal, and an upstream line signal. In a second system, a transmission/reception period is set in a PCF mode immediately after a beacon and after this, a transmission/reception period in a DCF mode is set. It should be noted that in the first system, a reserved period is set for a period after the PCF mode of the second system, and an RCH reception period is started upon start of the PCF mode of the second system.

(57) Abstract :

A radio LAN system and a radio LAN system signal collision evading method capable of evading signal collision between a radio LAN system starting communication periodically and a radio LAN system starting communication after waiting for an empty communication path. When a scheduler block (6) recognizes presence of a non-signal interval between a downlink phase and an uplink phase upon scheduling a communication frame, the scheduler block (6) arranges an NAV setting signal after the downlink phase so as to cover the non-signal interval in accordance with an instruction from a NAV setting signal generation block (8), thereby performing scheduling and transmission. Thus, in the non-signal interval, no data transmission is performed by a radio LAN system station of the IEEE 802.11a standard, thereby evading signal collision in the uplink phase period.

(57) Abstract : By the present invention, a nutritional composition is provided for use as a nutritional supplement to a diet on a regular basis, e.g. on a daily basis. The composition comprises vitamin compounds comprising a selection of vitamins, mineral compounds comprising a selection of minerals, and fish oil granulate in dry pulverised form comprising eicosapentaenoic acid (EPA) and docosahexaenoic acid (DHA). Hereby, a comprehensive nutritional supplement is provided by which the diet may be supplemented not only by minerals and vitamins but also by the omega-3 fatty acids EPA and DHA of the fish oil granulate. Side effects such as bad taste and smell are removed by using the fish oil granulate.

---	---

(57) Abstract : The invention relates to a method for removing soot particles from an exhaust gas of an internal combustion engine (1), especially of a diesel engine. According to said method, the exhaust gas is led through a collecting element (5) through which the exhaust gas can pass freely but which is provided with a plurality of deviations and/or areas of swirl and stabilization. At least a proportion of the particles are held or swirled around in said collecting element until there is a sufficient probability of reaction with the nitrogen dioxide until the majority of the collected particles have been removed. A collecting element (5) of this type has flow channels (13; 23) through which the exhaust gas can pass freely, however these flow channels (13; 23) are configured in such a way as to form deviations (15, 16; 25, 26) or areas of swirl and stabilization.

(57) Abstract :

The overall characteristic curve for an overload trip should fall monotonically, which isn't always the case for certain choices of set values. According to the invention, the characteristic curve of an overload trip in the overload region (I), for a section of the curve situated before the short-delayed short-circuit region (II), may be set with the delay time (t_{sdi}), which is independent of current and dependent on the short delay time (t_{sd}) and which is at least as big as the short delay time (t_{sd}). The above is particularly advantageous in the case of current measurement by means of Rogowski coils.

(57) Abstract : A process to produce a first catalyst composition is provided. The process comprises contacting at least one first organometal compound and at least one activator to produce the first catalyst composition. The activator is selected from the group consisting of aluminoxanes, fluoro-organo borates, and treated solid oxide components in combination with at least one organoaluminum compound. In another embodiment of this invention, a process to produce a second catalyst composition for producing bimodal polymers is provided. The process comprises contacting at least one first organometal compound, at least one activator, and at least one second organometal compound to produce the second catalyst composition. The first and second catalyst compositions are also provided as well as polymerization processes using these compositions to produce polymers.

(57) Abstract :

The present invention relates to a beta 3 adrenergic receptor agonist of formula (I) or a pharmaceutical salt thereof; which is capable of increasing lipolysis and energy expenditure in cells and, therefore, is useful for treating Type II diabetes and/or obesity. The compound can also be used to lower triglyceride levels and cholesterol levels or raise high density lipoprotein levels or to decrease gut motility. In addition, the compound can be used to reduced neurogenic inflammation or as an antidepressant agent. Compositions and methods for the use of the compounds in the treatment of diabetes and obesity and for lowering triglyceride levels and cholesterol levels or raising high density lipoprotein levels or for decreasing gut motility are also disclosed.

--	--

(57) Abstract :

The present invention, generally speaking, provides an RF power amplifier that exhibits high PAE at high output powers. The design of the power amplifier is based on the observation that the switching transistor is controlled by either voltage (for a FET) or current (for bipolar transistors), but not both. Thus, it is not necessary to develop power from the driver amplifier in order to operate the final stage as a switch. This recognition runs exactly counter to conventional wisdom, i.e., the concept of impedance matching for interstage design of high efficiency power amplifiers. It is impossible to develop solely a voltage waveform or a current waveform in a passband (resonant) network such as an RF power amplifier both voltages and current must exist. In accordance with one aspect of the invention, however, instead of maximizing power transfer, power consumption is reduced while maintaining the magnitude of the voltage (or current) waveform. In accordance with another aspect of the invention, the driver is designed to, along with the final stage, operate in switch mode. In this instance, the design of the interstage network is similar to that of a Class E output stage. In the case of the interstage network, however, the objective is not to develop maximum power across the load (as in the case of the Class E output stage). Rather, the objective is to develop the maximum voltage across the driver's load (which is the switch input). In this arrangement, the input device of the switch may be sufficiently high that the operating voltage of the driver stage may be reduced. This reduction further reduces the DC supply power to the driver, enhancing PAE.

---	---

(57) Abstract :

In a drill rod for a drilling machine, the rod outer diameter has a large diameter almost equal to the drill hole diameter; an a male thread is formed at one end and a female thread at the other end; with at least one small diameter portion adjacent the female thread. This step tube rod is capable of reducing the bending of holes. Further, a drilling machine using this step tube rod facilitates the positioning of the drill rod and is capable of efficiently and safely effecting the connecting and recovering operation.

---	--

(57) Abstract :

A fault current detection system is provided. The detection system detects a fault current generated on a conductive path supplying power to an electric device and prevents the fault current from being supplied to the electric device. In particular, the detection system contains a detector, a switch, and a controller. The detector detects a fault current generated on the conductive path and outputs a corresponding detection signal. The controller inputs the detection signal and determines predetermined characteristics of the fault current based on said detection signal. Then, the controller identifies the fault current as a first type of fault current based on the predetermined characteristics and sets a trigger current to a first trigger current value when the fault current is identified as the first type of fault current. Also, the controller outputs a control signal to the switch to instruct the switch to isolate the electric device from the conductive network when the fault current is greater than the trigger current. In addition, a software program performed by the fault current detection system is also provided.

(57) Abstract :

The invention relates to a brush having a bristle area (15) which comprises a plurality of bristles (14), bristle bundles or pins, and is attached to a bristle holder (13). The aim of the invention is to reduce the accumulation of dirt and the formation of mould and bacteria. For that purpose, the surface of the bristle holder is at least partially, preferably thoroughly, sealed in the bristle area. Sealing is obtained through formation of a coating or a surface layer compressed with heat energy on the bristle holder.

---	---

(57) Abstract :

The invention relates to a method and a system for implementing a sequence for sales and provision of information at a retail establishment or in a similar area where a local radio communication is established between a central computer unit (30) and mobile terminals (20), equipped with bar code readers. For implementation of the sequence, the unit (30) first receives an initiation order from a terminal (20), transmitted via a telecommunication network via a second unit (40) at a service provider. The telecommunication is then disconnected, and local radio communication is employed for the communication between the customer's terminal and the shop's unit (30). A unique identification is created for the sequence, and a registration list is established associated with the sequence. The unit (30) further receives data input by means of the bar code reader in the terminal (20), comprising information (101) concerning each item. The registration list is updated with data associated with the goods, and these data can also be displayed on the terminals (20). Finally a payment or credit transaction is initiated based on the updated registration list and the identification for the sequence.

(57) Abstract :

compressor including a cylinder assembly having a compression space through which suction passages and discharge passages are connected, a rotation driving unit inserted into the compression space of the cylinder assembly to transfer a rotation force, a slant compression slanted plate installed in the compression space to divide the compression space into at least two parts and rotating by being connected to the rotation driving unit, and vane units attached on both sides of the slant compression plate to classify the partitioned compression space into a suction space and a compression. With this construction, a vibration and a noise can be reduced and a stable driving force can be obtained even with a relatively small capacity electric motor. In addition, since fluid can be compressed and discharged simultaneously in both sides of the slant compression plate, an excellent compression performance can be accomplished in a simple structure.

(57) Abstract :

This invention relates to the field of IP telephony. More particularly, this invention is a method and system for selecting gateways for routing calls through a packet-based telecommunications network interconnected with a public telecommunications network. This invention is a method and system for dynamically detecting available gateways (110a, 110b), dynamically removing failed or unavailable gateways (110a, 110b), and automatically recovering failed or unavailable gateways after a predetermined period of time. An embodiment of this invention comprises two user agents (102, 103) within two telephony systems (114a, 114b) that are connected to an IP network (112); a plurality of gateways (110a, 110b); an IP telephony proxy server (106); an IP redirect server (104); and a network management system (108).

(57) Abstract :

An electrically driven toothbrush having a replaceable head section with a plug part which is engageable with a socket in its handle to connect its driveable head to its motor in the handle. The head section has a resiliently deformable end surface, and there is an engaging concavity and convexity in the respective meeting end surfaces of the plug part and the socket. The concavity and convexity engage to facilitate locking together of the head and handle. A separate replaceable head section for such a toothbrush is also provided.

(57) Abstract :

A process for separating a feed mixture comprising at least one aromatic hydrocarbon and at least one non-aromatic hydrocarbon by extractive distillation (ED) utilizing a solvent mixture comprising sulfolane and at least one co-solvent. The co-solvent is an alkyl sulfolane having from 4 to 8 carbon atoms per molecule. The solvent mixture is added to the top of the ED column, and the feed mixture is added at a point on the ED column that is lower than the point where the solvent mixture is added. Extractive distillation is performed, and the aromatic and non-aromatic hydrocarbons are separated.

(57) Abstract :

An elongate metallurgical lance (27) for injecting solid particulate material into molten material held within a vessel (11) is disclosed. The lance includes a central core tube (31) through which to pass solid particulate material, an annular cooling jacket (32) surrounding the central core tube throughout a substantial part of its length, a coolant inlet means (52), and a coolant outlet means (53). An outer wall of a forward end section of the jacket is formed from a first material which has high heat transfer properties and can withstand external temperatures above 1100 DEG C for prolonged periods when the jacket is cooled by coolant flow. An outer wall of a body section of the jacket is formed from a second material that maintains its structural properties when exposed to external temperatures above 1100 DEG C for prolonged periods when the jacket is cooled by coolant flow, whereby the outer wall acts as a structural member that contributes to supporting the lance at these temperatures. The outer wall of the forward end section and the outer wall of the body section are welded together.

COMPLETE SPECIFICATION ACCEPTED

Notice is hereby given that any person interested in opposing the grant of a Patent on any of the Applications, may, at any time within four months from the date of this issue of Gazette or within further period of one month if applied for in Form 4 before the expiry of the said period of four months, give notice to the Controller of Patents at the Appropriate Office on Form 7 of such opposition. The Written Statement of Opposition accompanied by evidence, if any, should be filed in duplicate alongwith the said notice or within further period of two months. Section 25 of The Patents Act, 1970 as amended and Rules 55 to 57 of The Patents Rules, 2003 may be referred to in this regard.

Photo copies of the specification and drawings, if any, can be supplied by the Appropriate Office on payment of photocopying charges @ Rs. 4/- per page.

Appropriate office for opposition proceedings (Rule 4, Patents Rules, 2003) Patent Office Branch, New Delhi - 110 008.

(3 Claims)

A device for control of high voltage direct current transmission installation, comprising a first and a second series-compensated converter (SR1, SR2, respectively) which are mutually connected via a common dc connection (L1, L2), each one controlled by a separate control equipment (CE1, CE2, respectively) and each one connected to a separate alternating - voltage network (N1, N2, respectively), each one of control equipment comprising a current controller (CC) of the first and second converters supplied with a current reference value (IOL1, IOL2, respectively) for the current (I_d) in the dc connection wherein the control equipment of at least the second converter comprises a function-forming member (11) which in dependence on an applied measured value (UD) of the direct voltage at the second converter forms the current margin.

Indian Classification	:	107 H	192534
International Classification ⁴	:	F 02M 49/00	
Title	:	"A FUEL INJECTION PUMP"	
Applicant	:	STANADYNE AUTOMOTIVE CORP., a Delaware corporation, of 92 Deerfield Road, Windsor, Connecticut 06095, United States of America.	
Inventors	:	KENNETH HARRY KLOPFER – U.S.	
Kind of Application	:	COMPLETE.	

Application for Patent Number 756/DEL/94 filed on 15.6.94.

Appropriate office for opposition proceedings (Rule 4, Patents Rules, 2003) Patent Office Branch, New Delhi – 110 008.

(14 Claims)

- A fuel injection pump having a pump rotor providing a pump body and distributor rotor in coaxial alignment, the pump body having a pumping chamber with an annular arrangement of pumping plunger bores with axes extending generally radially outwardly from the axis of the pump rotor;
- a pumping plunger mounted in each plunger bore;
 - a cam surrounding the pump body for reciprocating the pumping plungers;
 - a drive shaft in coaxial alignment with the pump rotor adjacent to the pump rotor;
 - a distributor head, with an inner rotor support sleeve, having a plurality of distributor outlets;
 - the distributor rotor being rotatably mounted within the rotor support sleeve;
 - the pump rotor having a central coaxial throughbore providing a valve bore intersecting the plunger bores and an annular valve seat;
 - an elongated valve member, mounted in the valve bore, having a sealing head engageable with the annular valve seat and extending from the sealing head toward the opposite end of the pump rotor from the drive shaft, the valve member being axially shiftable in the valve bore in one axial direction to a closed position thereof with the sealing head in engagement with the valve seat and in the opposite axial direction to an open position thereof with the sealing head axially spaced from the valve seat;
 - an electromagnet at said opposite end of the pump rotor, the electromagnet comprising a transverse armature plate fixed to the valve member and a stator, axially spaced in said one

axial direction from the armature plate, operable when energized to attract the armature plate to pull the valve member in said one axial direction towards the stator to its closed position;

- spring means shifting the valve member in the opposite axial direction to its open position when the electromagnet is de-energized;
- first coupling means coupling the adjacent inner ends of the drive shaft and pump rotor for positive rotation of the pump rotor with the drive shaft, said pump characterized in that:

a valve stop is mounted on the pump rotor between the pump rotor and the armature plate, the valve stop and armature plate having opposed transverse faces engageable for establishing said open position of the valve member, one of said transverse faces having a hydraulic damping means comprising a plurality of lands engageable by the other transverse face and a plurality of intermediate grooves, and that a second and a third rotary drive coupling means is provided between the valve stop and the pump rotor and the armature plate and the valve stop respectively.

Appropriate office for opposition proceedings (Rule 4, Patents Rules, 2003) Patent Office, New Delhi Branch - 110 008.

(Claims 06)

A process for the preparation of a combustible tube for use in a primer comprising winding a tube of a propellant sheet having a composition of nitrocellulose, nitroguanidine known stabilizer, and rayon cloth over a metallic mandrel using acetone as an adhesive material, embossing thread impressions on said tube at one end thereof, drying said tube and punching holes into said combustible tube and then coating said combustible tube with varnish and then drying said tube.

Application for Patent Number 1798/DEL/1995 filed on 29/09/1995

Appropriate office for opposition proceedings (Rule 4, Patents Rules, 2003): Patent Office Delhi Branch, New Delhi-110 008.

(02 Claims)

An improved process for the preparation of lead magnesium niobate (PMN) based high permittivity ceramics useful for the manufacture of multi layer capacitors which comprises:

- i) calcining mixed magnesium oxide in the range of 2 to 10% by wt. and niobium pentoxide in the range of 10 to 30% by wt of final product at a temperature in the range of 850-1100°C for a period in the range of 10 to 30 hrs. to form magnesium niobate,
- ii) grinding the said magnesium niobate with three or more additives selected from lead oxide in the range of 45 to 75% by wt; titanium dioxide in the range of 2 to 5% by wt; zirconium dioxide in the range of 1 to 4 % by wt., barium carbonate in the range of 0.5 to 3% by wt; strontium carbonate in the range of 1 to 7% by wt; and calcium carbonate in the range of 1 to 5% by wt., drying and calcining again at a temperature in the range of 750 to 900°C for a period of 2 to 8 hrs to form a precursor,
- iii) wet grinding the said precursor with three or more ingredient selected from

zirconium dioxide in the range of	0.05 to 1.5% by wt;
titanium dioxide in the range of	0.1-2% by wt;
Magnesium oxide in the range of	0.1 to 4% by wt;
Lead oxide in the range of	0.5-5% by wt;
Boric acid in the range of	0.2-4% by wt;
Calcium carbonate in the range of	0.5-2.5% by wt;
Manganese dioxide in the range of	0.2-2% by wt;
Lithium fluoride in the range of	0.3-6% by wt; in addition to
polyvinyl alcohol in the range of 0.4 to 4% by wt to obtain milled slurry,	
- iv) drying the said milled slurry to obtain lead magnesium niobate based high permittivity ceramics.

(4 Claims)

1. Process for preparing cool shampoo which comprises of :—

- (i) Heating de-mineralized water (D.M. Water) (8 to 12 kgs) to a temperature of 65°C to 90°C and holding the same for 20 to 40 minutes;
- (ii) Mixing the de-mineralized water (D.M. Water) of step (i) with Xanthum Gum (XG) (Viscosity Ingredient) (4.0 to 6.0 kgs) at a rate so that good vortex is created and if required adding further Xanthum Gum (XG) so that no more fish eyes Xanthum Gum (XG) are seen;
- (iii) Adding shampoo base, which comprises of Sodium Lauryl Ether Sulphate (28%) (55.0 to 65.0 kgs), Coco Amide Propyl betaine (4.0 to 6.0 kgs), Polyquat (1.0 to 3.0 kgs) and D.M. Water (8.0 to 12.0 kgs) and filling agent such as Ethylene Diamino Tetra Acetic Acid (0.25 to 0.75) while mixing;
- (iv) Preparing a mixture of shampoo base which comprises of Sodium Lauryl Ether Sulphate (28%) (55.0 to 65.0 kgs), Coco Amide Propyl Betaine (4.0 to 6.0 kgs), Polyquat (1.0 to 3.0 kgs) and D.M. Water (8.0 to 12.0 kgs) and Silicone oil (2.25 to 2.75 kgs);
- (v) ^a Mixing the obtained ingredients of steps (iii) and (iv) in a shampoo making vessel;
- (vi) Thereafter adding colouring agents such as Brilliant Blue (2%) (0.10 to 0.30 kgs) and extracts which comprises of Vetiver extract (0.04 to 0.06 kgs), Chamomile Extract (0.10 to 0.50 kgs) and Bronopol (0.00004 to 0.00007 kgs) and essential oil such as Mentha Oil (0.5 to 1.0 kgs) while mixing for 20 to 30 minutes and maintaining pH of the mass;
- (vii) Adding Formalin (0.50 to 1.0 kgs) Menthol (0.5 to 1.0 kgs), Menth Oil (0.5 to 1.0 kgs), and known perfume (4.0 to 6.0 kgs) at a temperature of 40°C to 50°C to above mass of step (vi), filtering the obtained product of step (vii), defoaming the mass with vacuum and adding Lipo Blue (2.0 to 4.0 kgs) while mixing and maintaining viscosity.

Title : A METHOD FOR THE PRODUCTION OF HONEYCOMBS FOR BEEKEEPING AND APPARATUS THEREFOR
Applicant : BREAT, SL OF IFNI 17, 08930, SANT ADRIA DE BESOS (BARCELONA), SPAIN
Inventor : FERRER CARLOS VIDAL
Application no. 389/CAL/2000 FILED ON 10.7.2000
(CONVENTION NO. 9901689 FILED ON 27.7.99 IN SPAIN)
APPROPRIATE OFFICE FOR OPPOSITION PROCEEDING (RULE 4, PATENT RULES 2003)

PATENT OFFICE KOLKATA.

8 CLAIMS.

1. A method for the production of honeycombs for beekeeping which comprises molding a mass of hot wax by the action of cores of an endless belt, the cores being of a shape complementary to that of the cells, characterized in that both faces of the honeycomb are moulded simultaneously by the action of respective belts carrying cores having resilience properties, and after the honeycomb has cooled, compressing it on both faces to allow the cores to be separated from the walls of the cells, taking advantage of the resilience of the cores and their ability to regain their shape and of the plasticity of the cells and the permanent deformation brought about therein.

Application no. 1445/CAL/1997 FILED ON 05.08.1997

(CONVENTION NO. 8-209794 FILED ON 08/08/1996 IN JAPAN)

APPROPRIATE OFFICE FOR OPPOSITION PROCEEDING (RULE 4, PATENT RULES 2003)

PATENT OFFICE KOLKATA.

10 CLAIMS.

A process for producing a disazo pigment composition comprising the following components (a) to (c) :

(a) a disazo pigment such as herein described;

(b) a disazo compound expressed by the following Formula (I) :

wherein X and Y each independently denote a hydrogen atom; a halogen atom, an alkyl group with 1—4 carbon atoms, an alkoxy group with 1—4 carbon atoms or an alkoxy carbonyl group having an alkoxy group with 1—4 carbon atoms, provided that X and Y never simultaneously denote hydrogen atoms, Z¹ denotes a phenyl group or a naphthyl group which may have 1—4 identical or different substituent groups selected from the group consisting of lower alkyl groups, lower alkoxy groups, halogen atoms, hydroxyl groups and lower alkoxy carbonyl groups, and Z² denotes a phenyl group or naphthyl group which may have 1—4 identical or different substituent groups selected from the group consisting of lower alkyl groups, lower alkoxy groups, halogen atoms, hydroxyl groups and lower alkoxy carbonyl groups, and having a carboxylic acid group and/or a sulfonic acid group which may be a salt of a metal of at least one type selected from the group consisting of alkali earth metals, aluminum, magnesium and zinc; and

(c) a disazo compound expressed by the following Formula (II) :

wherein X and Y each independently denote a hydrogen atom, a halogen atom, an alkyl group with 1-4 carbon atoms, an alkoxyl group with 1-4 carbon atoms or an alkoxycarbonyl group having an alkoxyl group with 1-4 carbon atoms, provided that X and Y never simultaneously denote hydrogen atoms, Z¹ denotes a phenyl group or a naphthyl group which may have 1-4 identical or different substituent groups selected from the group consisting of lower alkyl groups, lower alkoxyl groups, halogen atoms, hydroxyl groups and lower alkoxycarbonyl groups, and Z³ denotes a benzimidazolone residue, a phthalimide residue, or a phenyl group or naphthyl group which may have 1-4 identical or different substituent groups selected from the group consisting of lower alkyl groups, lower alkoxyl groups, halogen atoms, hydroxyl groups and lower alkoxycarbonyl, and having 1-4 substituent groups selected from the group consisting of carboxylic amide groups, sulfonic amide groups and acetamido groups;

the amounts of the above (a) to (c) are such that when total amount of (a) (b) and (c) is 100 % by weight, the amount of (b) is 1 to 20 % by weight, the amount of (c) is 1 to 20 % by weight, and the amount (a) is the balance;

the process comprising one of the following methods (d) to (f):

(d) a method of mixing the disazo compound expressed by general formula (I) and the disazo compound expressed by general formula (II) into a disazo-pigment synthesized by a conventional method, then extracting as a press cake pigment or a powder pigment;

(e) a method of sequentially mixing in a disazo pigment synthesized by a

conventional method, the disazo compound expressed by general formula (I) and the disazo compound expressed by general formula (II) which have been separately stored, when preparing an ink or a coating; or

(f) a method of simultaneously synthesizing a disazo pigment, the disazo compound expressed by general formula (I) and the disazo compound expressed by general formula (II);

the above-described method (f) being a method of the following (i) or (ii):

(i) a method of obtaining a disazo pigment composition by mixing a reaction intermediate of the tetrazo compound of aromatic diamine expressed by general formula (III)

(wherein X and Y each independently represent a hydrogen atom, a halogen atom, an alkyl group having 1-4 carbon atoms, an alkoxyl group having 1-4 carbon atoms or an alkoxycarbonyl group having an alkoxyl group having 1-4 carbon atoms; with the exception that X and Y never simultaneously represent hydrogen atoms) and an acetoacetamide compound (hereinafter referred to as coupling component A2) expressed by the following general formula (IV):

(wherein Z^2 represents a phenyl group or a naphthyl group which may have 1-4 identical or different substituent groups selected from the group consisting of lower

alkyl groups, lower alkoxyl groups, halogen atoms, hydroxyl groups and lower alkoxycarbonyl groups; the phenyl groups or naphthyl groups having 1-4 carboxylic acid groups and/or sulfonic acid groups; the carboxylic acid groups and/or sulfonic acid groups being capable of being salts of at least one type of metal selected from the group consisting of alkali earth metals, aluminum, magnesium and zinc) with a reaction intermediate of the tetrazo compound of aromatic diamine expressed by general formula (III) and an acetoacetamide compound (hereinafter referred to as coupling component A3) expressed by the following general formula (VI):

(wherein Z^3 is a benzimidazolone residue, a phthalimide residue, or a phenyl group or a naphthyl group which may have 1-4 identical or different substituent groups selected from the group consisting of lower alkyl groups, lower alkoxyl groups, halogen atoms, hydroxyl groups and lower alkoxycarbonyl groups; the phenyl groups or naphthyl groups having 1-4 substituent groups selected from the group consisting of carboxylic amides, sulfonic amides and acetamido groups), and adding the mixture, or adding these reaction intermediates without mixing them, to acetoacetamide compound (hereinafter referred to as coupling component A1) expressed by the following general formula (V):

(wherein Z^1 represents a phenyl group or a naphthyl group which may have 1-4 identical or different substituent groups selected from the group consisting of lower alkyl groups, lower alkoxyl groups, halogen atoms, hydroxyl groups and lower

alkoxycarbonyl groups) to induce a reaction; or

(ii) a method of mixing together a pigment composition obtained by reacting a reaction intermediate of the tetrazo compound of aromatic diamine expressed by general formula (III) and coupling component A2 with the coupling component A1, and a pigment composition obtained by reacting a reaction intermediate of the tetrazo compound of aromatic diamine expressed by general formula (III) and coupling component A3 with the coupling component A1.

5 CLAIMS.

An apparatus for coding a contour of an object employing temporal correlation thereof, wherein input contour image representing locations of contour pixels composing a current contour based on a previous contour representing locations of contour pixels constituting a previously encoded contour is encoded to thereby provide encoded contour information, which comprises:

contour reconstruction block (110), memory (120) and ME & MC block (130) for generating a predicted contour by motion estimating and motion compensating the previous contour based on the current contour;

predicted contour pixel indexing block (140) indexing contour pixels on the predicted contour starting from a reference point and going sequentially in a preset direction;

matched segment detection block (150) for detecting each of matched segments of the current and the predicted contours, a matched segment representing a contour part wherein the current and the predicted contours overlap with each other, and providing end-points of each matched segment as pair of major vertices;

major vertex coding block (160) for sequentially coding indices of the major vertices given by the matched segment detection block (150) to thereby provide encoded major vertex information including pairing information representing which pair of major vertices form each matched segment;

unmatched segment division block (170) for detecting each of unmatched segments, an unmatched segment representing a segment which is not included in any of the matched segments;

polygonal approximation block (180) for polygonal approximating each of the unmatched segments to thereby detect minor vertices;

dynamic range decision block (190) for calculating a dynamic range for encoding each of the major vertices, wherein the dynamic range allocates bits for encoding each of the minor vertices;

minor vertex coding block (200) for encoding the minor vertices with bits allocated by the corresponding dynamic range to thereby provide encoded minor vertex information; and

multiplexor (210) for combining the encoded major vertex information and the encoded minor vertex information as said encoded contour information.

 Int. Cl.⁷ : C10L 9/02
 Title : A METHOD OF PRODUCING IMPROVED COKE FUEL FOR SINTERING IRON ORES.
 Applicant : STEEL AUTHORITY OF INDIA LTD. OF ISPAT BHAWAN, LODI ROAD, NEW DELHI - 110003
 Inventor : 1. ARUNABHA DAS.
 2. VENKAT RAO DESHMUKH
 3. V.K GULATI

Application no. 258/CAL./1997 FILED ON 14.2.1997

APPROPRIATE OFFICE FOR OPPOSITION PROCEEDING (RULE 4, PATENT RULES 2003)

PATENT OFFICE KOLKATA.

2 CLAIMS.

A method of producing coke of increased fuel efficiency for sintering iron ores, characterised in that the method comprises the following steps :-

- (a) receiving manually/mechanically coke of particle size smaller than 25 mm in underground track hopper 1 and lump lime of lump size smaller than 50 mm in underground track hopper 2;
- (b) conveying the coke from track hopper 1 to conveyor 5 by means of conveyor 3 and lump lime from track hopper 2 also to conveyor 5 by means of conveyor 4 in 10:1 ratio by weight;
- (c) transferring the mix of coke and lump lime first from conveyor 5 to conveyor 6 and then from conveyor 6 to shuttle conveyor 7;
- (d) feeding the said mix from shuttle conveyor 7 into each of three storage bunkers 8A, 8B and 8C and from there into each of three disk feeders 9A, 9B and 9C, which feed the mix into each of three rod mills 10A, 10B and 10C; and
- (e) operating the rod mills in the known manner to obtain the coke of increased fuel efficiency from the delivery of each of the said three rod mills.

Complete Specifications : 6 pages.

Drawings: 1 sheets

RESTORATION PROCEEDINGS (MUMBAI)

Notice is hereby given that an application was made under Section 60 of the Patent Act, 1970 for the restoration of Patent No. 186850, granted to Pfizer Products, Inc., for an invention relating to A method of making a 2', 3' - alkylidene B-nucleotide analog.

The Patent ceased on 09.05.2003, due to non-payment of renewal fees within the prescribed time and the cessation of the patent was notified in the Gazette of India, Part III, Section 2, dated 10.4.2004.

Any interested person may give notice of opposition to the restoration by leaving a notice on Form-14 in duplicate, with the Controller of Patents, at Patent Office, Sun Mill Compound, Todi Estate, III Floor, Lower Parel (West), Mumbai-400013, with in two months from date of this official Gazette.

Under Rule 85 of the Patents Rules 2003, written statement, in duplicate setting out the nature of the opponens interest, the facts upon which he bases his case and the relief he seeks, shall be filed with the notice or within one month from the date of the notice.
